PTO,303 (Rev. 01-01)

Advisory Action

Part of Paper No. 11

Continuation of 4. Applicant's reply has overcome the following rejection(s): The reply has corrected some of the numerous spelling and grammatical errors.

Continuation of 11. Other: Numerous spelling, grammatical, and reference number errors are still outstanding. Examples of the outstanding errors are as follows:

On page 4, line 13 "pnuematically" should be --pneumatically--;

Line 15, "stantion" should be --stanchion--;

On page 8, line 18 "pnuematically" should be --pneumatically--;

On page 9, line 16 "interal" should be --integral--;

Line 25, "stancion" should be --stanchion--;

On page 10, line 5 "caried" should be --carried--;

Line 10, "botton" should be --button--;

On page 11, line 1 the second occurrence of "by" should be deleted:

Line 26, "reilient" should be --resilient--;

On page 12, line 7 "varing" should be --varying--;

On page 13, line 10 "4,085,256" should be --4,058,256--;

In Claim 43, "caried" should be --carried-..

The specification is objected to because numerous reference characters have been used to designate more than one object, for example: reference character "55" has been used to designate both "mounting plate" and "base plate";

reference character "45" has been used to designate both "horizontal portion" and "curved portion";

reference character "44" has been used to designate "lower end", "stand portion", and "stand end portion";

reference character "73" has been used to designate both "first end" and "barrel end portion";

reference character "81a" has been used to designate both "slots" and "openings";

reference character " 84" has been used to designate "resilient stop", "floating stops", and "dogs".

The specification is objected to because multiple reference characters have been used to designate the same part, for example:

reference characters "71" and "75" have both been used to designate "barrel";

reference characters "87" and "78" have both been used to designate "set screws".

Applicant is reminded that 35 U.S.C. 112, first paragraph, requires the specification to be written in "full, clear, concise, and exact terms." Careful revision of the specification is required in order to correct the numerous outstanding errors in order to comply with 35 U.S.C. 112, first paragraph.

Claim 39 is rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention. In lines 2 and 3 "said stop openings" and "said bumper openings" has no positive antecedent basis, since "stop openings" and "bumper openings" have not been previously claimed.

Applicant is reminded of the telephone interview on 2/9/01 with Mike Carone, in which Applicant agreed to cancel "and mixtures thereof" in Claim 25. Applicant is also reminded of the telephone interview on 1/24/01 with M. Thomson, in which the Applicant agreed that the structure of the valves and conduits of Claim 25 would not be usable with the claimed solid and therefore "solid" should be canceled from Claim 25.

MICHAEL J. CARONE SUPERVISORY PATENT EXAMINER
